

CDG Announces Release of **Secure On-Demand™** Hosted Solution

BELLEVUE, Wash., March 8, 2007 – Continental DataGraphics (CDG), a subsidiary of The Boeing Company [NYSE: BA], today announced the first commercial release of **Secure On-Demand™**, an enhanced version of its popular web-based *On-Demand Information Manager™* document portal. **Secure On-Demand™** offers robust security features and is delivered as a secure hosted application, affording greater control over distributed access to sensitive information.

Secure On-Demand™ is built on CDG's proprietary *On-Demand Information Manager™* technology, a platform that has been proven in commercial use for several years. Unlike traditional document management applications installed on local networks, **Secure On-Demand™** is provided from a securely hosted platform that is managed and safeguarded by CDG. As a hosted service, **Secure On-Demand™** enables greatly improved internal and external business supply-chain communications. A hosted solution also enables the rapid deployment of a total solution without major new capital outlays for equipment or the heavy resource requirements typically associated with installed document management software applications, resulting in a significant reduction in Total Cost of Ownership (TCO).

Secure On-Demand™ features a rich set of document management capabilities with extensive control over user access, viewing rights management, viewing history, and configurable metadata. Its sophisticated security features include multi-segment log-in, fully encrypted communications protocols, IP filtering under application control ("soft" IP filtering), and database embedded document binaries. It also offers a set of web services that enable integration with other strategic line-of-business applications.

Gary Beyer, Vice President of Business Development for CDG commented, "We have positioned **Secure On-Demand™** to benefit organizations with environments where a high level of trust and confidence are required. The decision to release this application for a broader range of industries is a natural evolutionary step for us. Our decades of experience as a trusted partner supporting the secure delivery of information for the Aerospace and Defense community have placed us in a credible position to deliver hosted confidential document services to other sectors with a need to protect sensitive information, such as Government, Healthcare, Finance and Insurance."

Secure On-Demand™ can be applied to support requirements for secure, centralized document repositories in a number of business environments, including Human Resources, Contracts and Legal departments, Customer Support, Engineering Services, Facilities Management, and internal or public access documents for various City and County government departments.
