

## **CDG to Host Executive Workshop: Advanced Strategies for Engineering and Technical Data Management**

**CYPRESS, Calif. – October 8, 2007** – Continental DataGraphics (CDG), a Boeing Company, announced an upcoming executive workshop event, “Advanced Strategies for Engineering and Technical Data Management”. The event will be hosted in Marina Del Rey, California on November 8. This educational workshop is designed to provide manufacturers and other engineering-focused organizations with an overview of several leading edge “Lean” approaches for managing engineering and technical data.

The workshop will provide an overview of the S1000D technical publications standard, which is rapidly gaining acceptance in both military and commercial engineering programs in the US. Also included in the agenda will be a discussion of Boeing’s recent decision and plans to adopt the S1000D standard for its 787 aircraft program, and an objective tutorial on the key factors to be considered when evaluating S1000D software tools. The workshop will also introduce some new and innovative approaches that have been applied to support collaborative engineering workflow in manufacturing firms, including a case study discussion of how one manufacturer resolved its document management challenges with its global outsourced manufacturing support partners.
