

Boeing Subsidiary CDG to Host 3D Modeling and Simulation Webinar

CYPRESS, Calif., October 27, 2009 – Continental DataGraphics (CDG), a Boeing Company, is hosting an educational webinar session entitled ***“Manufacturing Optimization Using 3D Simulation”***. With an emphasis on Lean practices, this informative webinar will provide an overview discussion and case study examples demonstrating how 3D simulation and modeling has been effectively applied to optimize manufacturing processes.

The webinar will share information on how manufacturers can utilize 3D modeling and simulation to:

- Validate proposed changes in manufacturing strategies without incurring large capital expenses
- Significantly enhance throughputs without reducing quality
- Effectively manage a global supply chain and optimize material flows
- Create virtual "What If" models to pre-test new processes and reduce up-front costs
- Reduce factory floor space requirements while increasing capacity
- Apply Lean techniques in a virtual process environment

The webinar will be hosted on two different session dates:

- Tuesday, November 3 - 11:00 a.m. Pacific Std. Time
- Friday, November 6 - 11:00 a.m. Pacific Std. Time

There is no charge to attend these educational webinars. Online registration is available at: <http://www.cdgnow.com/Boeing3DSimulationWebinar/index.html>.

About CDG

CDG is a world-class strategic partner for engineering-driven organizations that develop, support, and maintain complex equipment. A subsidiary of The Boeing Company, CDG specializes in helping organizations maximize efficiency through [Engineering Design](#), [Engineering Data Conversion](#), [Technical Publications](#) and [Document Imaging and Content Management](#) services and solutions.

For more information, visit the CDG web site at www.cdgnow.com.
